ANWARA FAVOUR CHIKA

Backend Developer

✉ Favouurchika02@gmail.com   📞 +2348163146024   📍 Enugu, Nigeria   in LinkedIn   🐦 Twitter   Github

Career Objective

My Objective as a backend developer is to continue honing my skills in designing, building, and optimizing scalable and secure backend systems. I aim to contribute to innovative projects, collaborate effectively within cross-functional teams, and advance my expertise in emerging technologies to deliver robust and efficient solutions that drive business success.

Education

Computer Engineering,   09/2019 – present │ Enugu State, Nigeria
Enugu State University of Science and Technology

Experience

Backend Web Developer, *Buildhubb*   08/2022 – 08/2023 │ Remote, Nigeria
Developed Scalable APIs: I've gained experience in designing and building robust, scalable APIs that handle diverse client requests efficiently. I understand RESTful principles and SQL, and i've optimized database queries for performance.

Worked with Databases: I've worked with various databases (e.g.,MongoDB,MySQL) and have experience in data modeling, schema design, and writing complex queries. I've also encountered challenges related to data consistency and security.
Debugged and Maintained Code: I've honed my debugging skills and are proficient at maintaining and enhancing existing codebases. I've collaborated with cross-functional teams to identify and resolve issues and have participated in code reviews and deployments.

WordPress Developer, *Recheo Health Foundation*   03/2021 – 06/2022 │ Remote, Nigeria
-Utilized HTML5 and CSS3 coding techniques while developing custom themes and plugins for WordPress websites.
-Researched new technologies that can be used to improve existing WordPress projects.
-Provided technical support when needed regarding any issues with existing WordPress websites.

Projects

ChatCord:
This is a Chat bot system built with websocket(socket.io) where programmers can interact with each other, it's more like a social media app for Developers.

Eventtrak:
This is an application that was built with, express, nodemailer and MongoDB for database management. It's an event application where users can search for upcoming events, create events and book tickets. It was a team project and I worked on the backend.
You can check out other projects on my Github link above.

Skills

Html, Css ● **Javascript** (Nodejs) ● **Git** (Github) ● **MongoDB, MySQL** ● **WordPress** ● **Canva**
